

**Home > Tube ice machine > Large capacity tube ice machine - Focusun Ice Machine**

The Large capacity ice tube machine features a modular design which makes it easy to install, ship and operate. The whole unit consists of 3 parts:

- Evaporator module: the evaporator and its accessories are installed on a steel frame which forms the evaporator module. When transporting, place the evaporator horizontally and stand it upright when installing.
- Compressor module: compressor, condenser, reservoir, liquid receiver, oil separator, and electric control box are installed on a steel frame to form the whole set.
- Cooling tower module: cooling tower, water pump and water pipes.

Standard power supply for large capacity tube ice making machine is 380V/3P/50Hz and it can be customized.

**Large capacity tube ice machine technical parameters**

Large capacity tube ice machine technical parameters.
